Standard ReactJS Procedures

Initialize ReactJS Project

1. Enter npm init
2. Enter npm install --save-dev babel-core babel-loader babel-preset-react babel-preset-es2015 webpack webpack-dev-server
3. Enter npm install --save react react-dom jquery
4. Append "scripts": {"start": "node_modules/.bin/webpack-dev-server --progress"},
5. Create and edit webpack.config.js:
    1. ```
       module.exports = {
         entry: [
           './src/app.js'
         ],
         output: {
           path: __dirname,
           filename: "bundle.js"
         },
         module: {
           loaders: [{
             test: /\.jsx?$/,
             loader: 'babel',
             exclude: 'node_modules',
             query: {
               presets:['react', 'es2015']
             }
           }]
         }
       };
       ```
6. Enter `npm start`
