

# Standard ReactJS Procedures

## Initialize ReactJS Project

1. Enter npm init
2. Enter npm install --save-dev babel-core babel-loader babel-preset-react babel-preset-es2015 webpack webpack-dev-server
3. Enter npm install --save react react-dom jquery
4. Append "scripts": {"start": "node\_modules/.bin/webpack-dev-server --progress"},
5. Create and edit webpack.config.js:

```
1. module.exports = {  
  entry: [  
    './src/app.js'  
  ],  
  output: {  
    path: __dirname,  
    filename: "bundle.js"  
  },  
  module: {  
    loaders: [{  
      test: /\.jsx?$/,  
      loader: 'babel',  
      exclude: 'node_modules',  
      query: {  
        presets: ['react', 'es2015']  
      }  
    }]  
  }  
};
```

6. Enter `npm start`
