LXDE Blueproximity Settings

Locking Command: `xscreensaver-command -activate`
Unlock Command: `pkill xscreensaver`
Proximity Command: `xscreensaver-command -time || daemonize /usr/bin/xscreensaver -no-splash`
Daemonize Utility: To stop blueproximity from hanging when using the proximity command, it requires the daemonize command (http://software.clapper.org/daemonize/). Using "xscreensaver -no-splash &" or "xscreensaver -no-splash" will cause blueproximity to hang.
