Playbook - Disable Windows Updates

This playbook will download disable_windows_update.ps1 from a server, reachable by all clients and execute the script to disable windows updates on a group of windows machines. Though it is written to specifically disable windows update, it can be modified to execute other scripts as well. The playbook configuration file is ass follows, replace enclosed `< >` tags with the desired values:

```
---
- hosts: <inventory group / hosts>
  tasks:
  - name: download script to disable windows update
    win_get_url:
      url: http://<url>/disable_windows_update.ps1
      dest: C:\
  - name: execute disable windows update script
    win_shell: C:\disable_windows_update.ps1
  - name: remove script
    win_file:
      path: C:\disable_windows_update.ps1
      state: absent
```
